

Azure Stream Analytics

Working with Data Streams

1. Data comes through an ASA job from a source like the web.
2. Key Data is obtained through the use of efficient queries.
3. Data package leaves while another is making it's way to our ASA job.

Working with Reference Data

1. Streaming Data comes through an ASA job from a source like the web.
2. Information obtained is compared to reference data stored.
3. The correlation of data coming from both sources provide meaningful insight not previously available on either source on its own.
